 - Github
 - MS office
 - Mysql
- Personal Skills
 - Teamwork
 - Time Management
 - Problem Solving Skills
 - Communication
 - Responsibility
 - Adapterbility

Language

English - Professional proficiency

Sinhala - Native

Projects

2022 Dec - 2023

Petvet Services

Veterinary Management System

- Veterinary clinical management system for veterinary staff, and client management.
- Using this clients can book their appointments, and check the availability of the doctors.
- Technologies used: React, Node JS, Express JS, MongoDB
- I am still contributing to developing the front end. Hope to contribute to developing the backend soon.

2022 Oct -2023 Jan

Pharmacy Hubweb Application

Pharmacy Hub Management System

- In our project, we provide a centralized platform where people can view or buy products from multiple pharmacies without traveling and finding pharmacies nearest to their current location.
- Used Technologies: HTML, CSS, Javascript, Firebase, Java, springboot, AWS.
- I only contributed to the front-end part.

2021 Jun -2021 Dec

Ceylone Tea Cloud

Tea Harvest Management System

- Tea harvest management system to make the connection comfortable between the tea factories of Sri Lanka and the growers by introducing a web application.
- By using our web application factory can manage the tea growers' records, generate reports, and manage their monthly salaries.
- Manage the factory staff using this, and tea growers can request fertilizers, and tea products through our web application.
- Used Technologies: HTML, CSS, Javascript, PHP, MySQL
- I only contributed to the front-end part.
